

Multi-Story Storage Systems

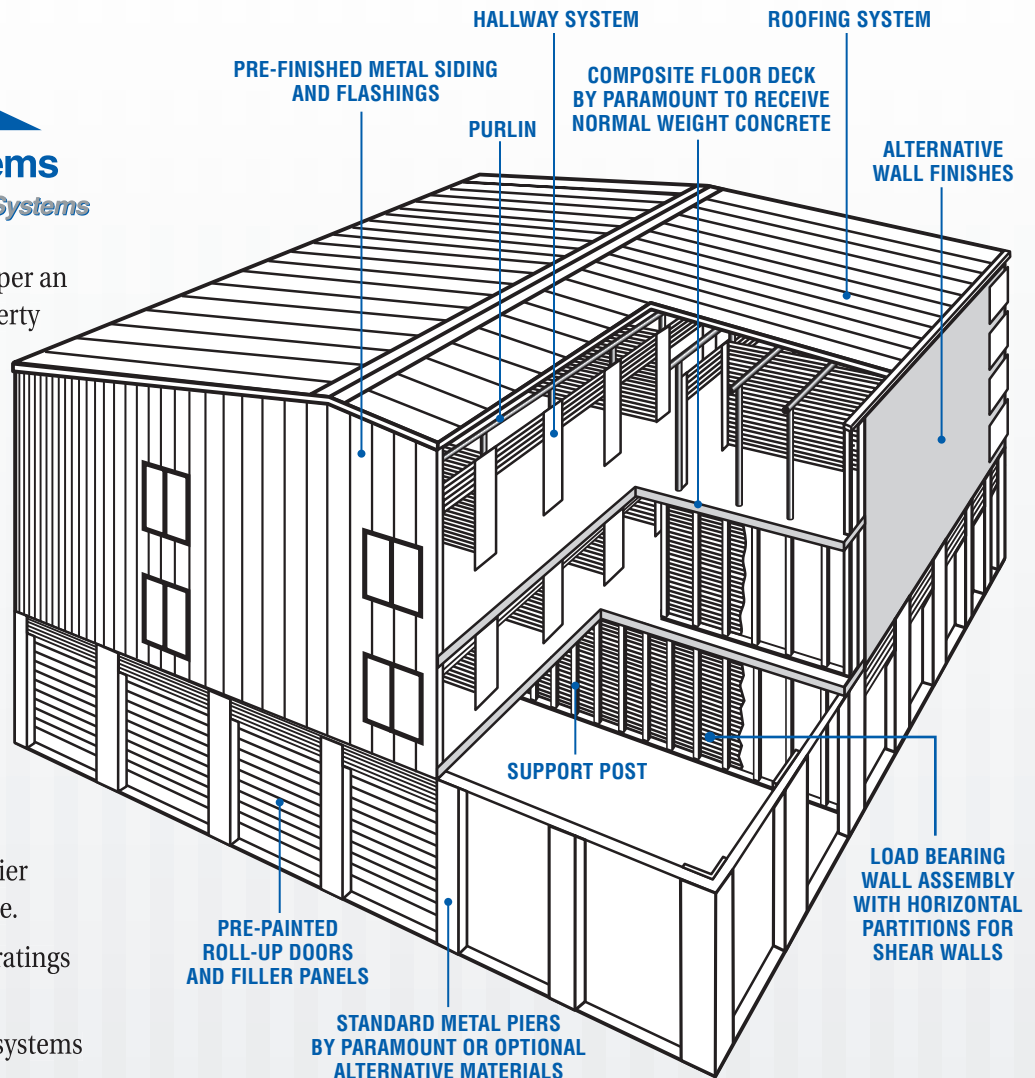

Paramount Metal Systems

Design/Build Steel Structures & Roof Systems

Designed to offer the owner/developer an economical way to maximize their property efficiencies, Paramount's load bearing wall system utilizes light gauge framing to reduce the cost of multi-story construction. Multi-story buildings can be architecturally designed to enhance appearances, provide high visibility and increase building values.

FEATURES & BENEFITS:

- Floor plans can be designed to your custom unit mix layout.
- Elevated floor systems are 125 lbs/psf standard design with options for heavier loads and with normal weight concrete.
- Elevated floor systems can meet U.L. ratings for fire safety requirements.
- Climate control features and hallway systems are easily integrated into the designs.
- Structures can be designed for seismic and high wind regions.
- Galvalume® partitions act as shear walls in horizontal applications.
- Auxiliary loads are designed to accommodate sprinkler systems and mechanical equipment.
- Compatible with virtually any exterior finish, such as pre-finished metal panels, masonry block, tilt-up construction, brick, or synthetic finishes like stucco or Dryvit®
- Can be integrated with standing seam roofing (unexposed fasteners) to minimize potential problems or exposed fastener roofing panels.
- Applicable trim packages to desired roof framing plans are available.
- Galvalume® and pre-painted material warranties are available up to 30 years.
